Data Plane Development Kit (DPDK)

Intel Optimized

Intel® Ethernet Controller

Intel® QuickAssist Technology

Open Source, Multi-Vendor¹

The Data Plane Development Kit (DPDK) is a set of software libraries and drivers for accelerating packet processing workloads on COTS hardware platforms.

Commercially Proven²

Open Source Ecosystem³

The Network Transformation Journey

Driving Network Scale & Agility

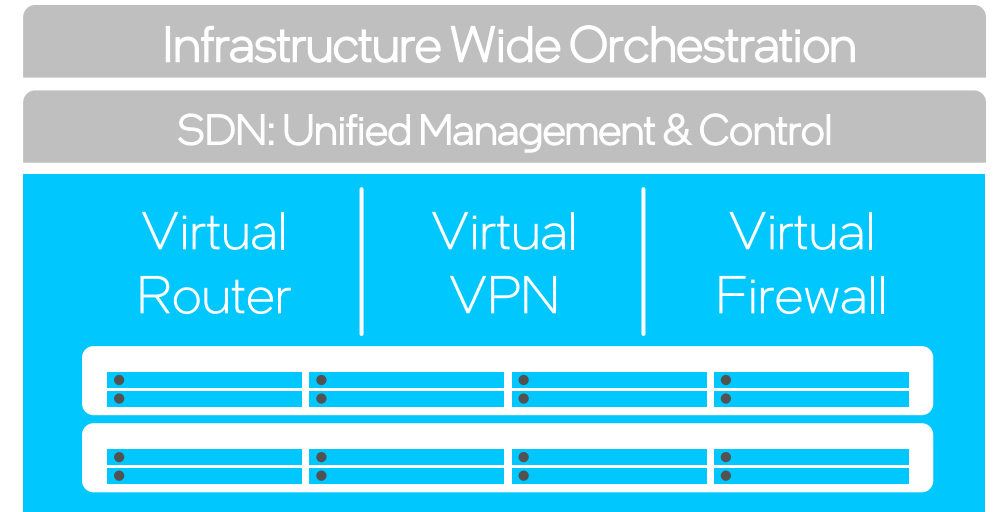

Yesterday: Purpose-Built

Siloed Management & Control

Transforming:
Architecture
Value Chain
Business Process

Modern: Built for Multi-Purpose

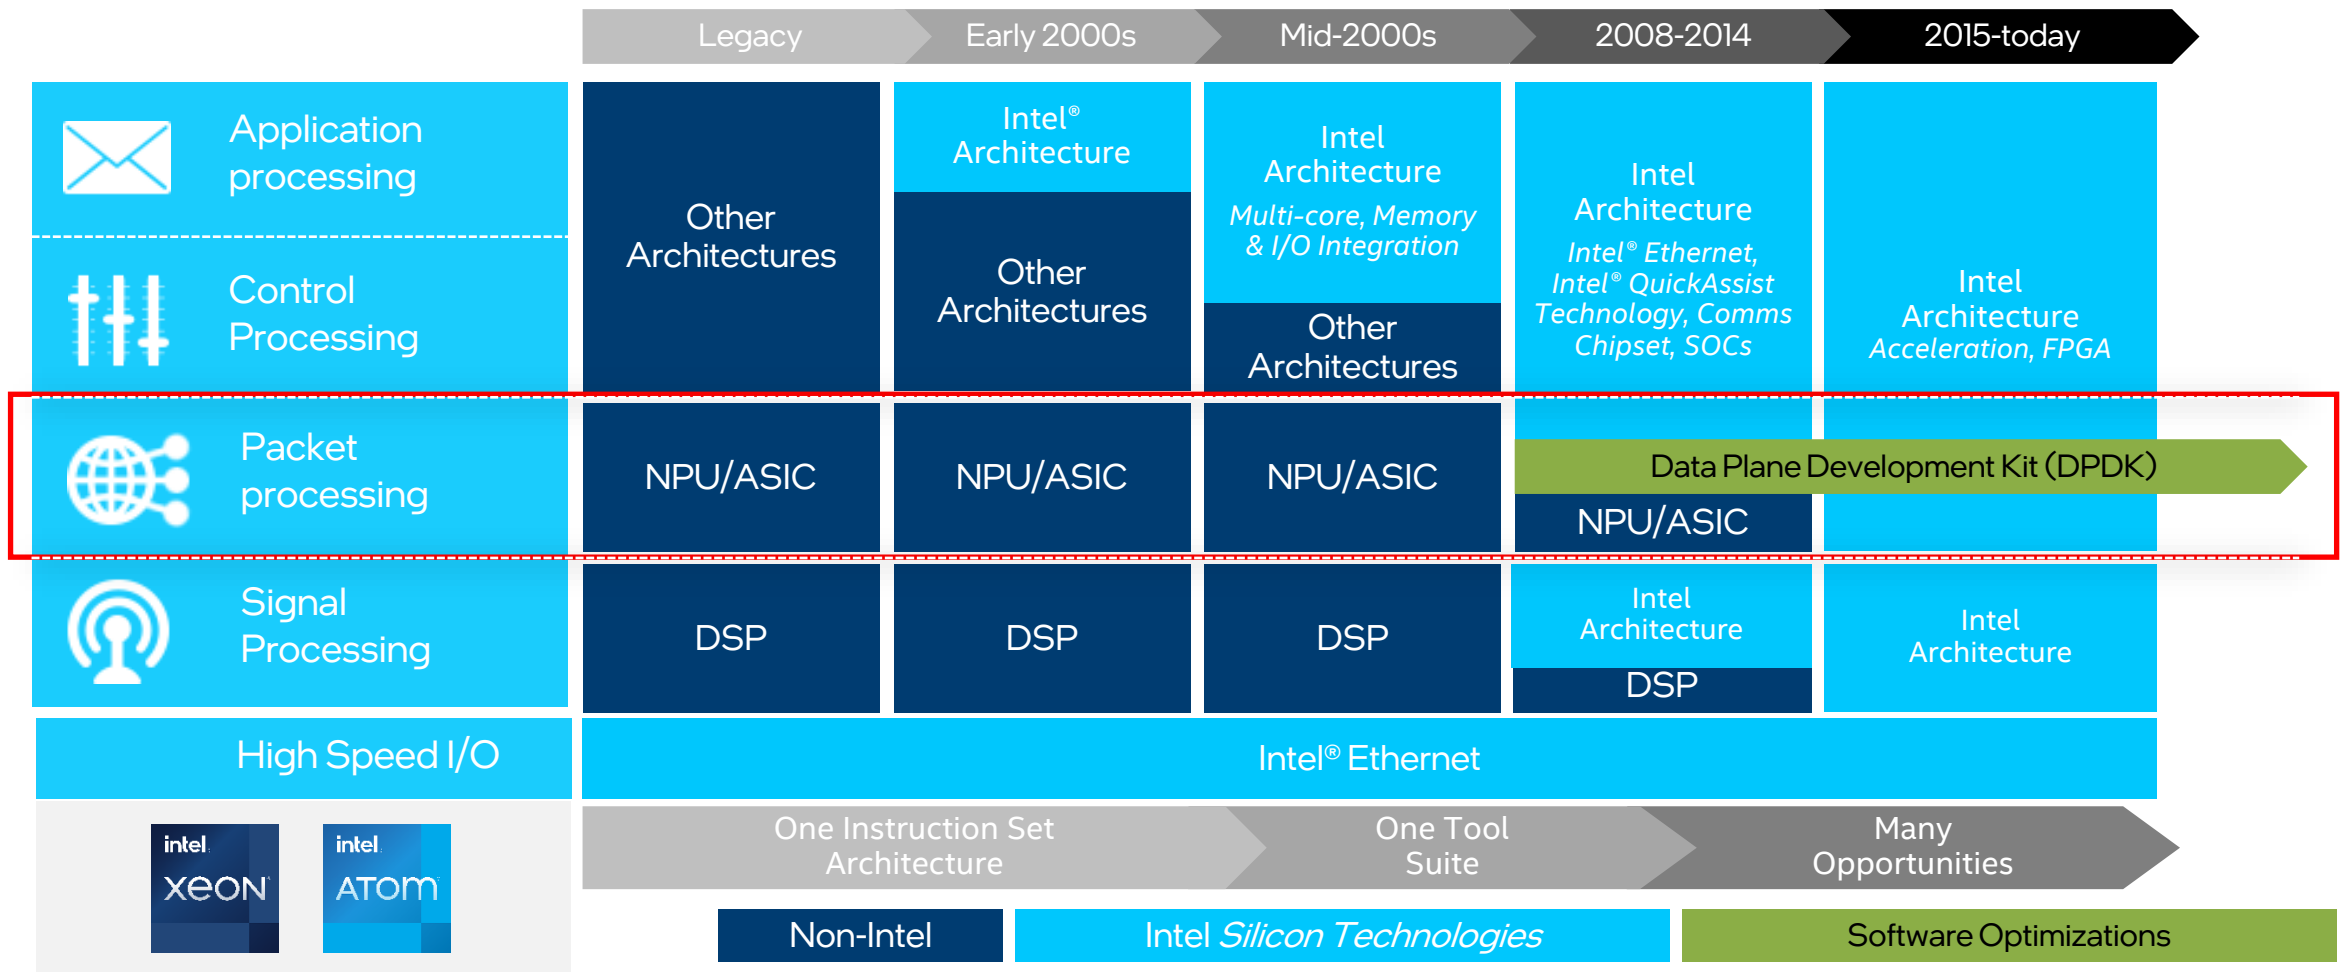

Proprietary hardware and software with an
optimized data plane

Open, standard platform serving diverse
workloads

Over a Decade of Investment in Workload Convergence

Hardware & Software Optimizations Allow the Migration of all Network Services to IA Platforms

High Performance Challenges

Cycles count

Packet Size	64 Bytes
40G packets/second	59.5 million each way
Packet arrival interval	16.8 ns
2 GHz clock cycles/packet	33 cycles

Typical Network Infrastructure Packet Size

Packet Size	1024 Bytes
40G packets/second	4.8 million each way
Packet arrival interval	208.8 ns
2 GHz clock cycles/packet	417 cycles

Typical Server Packet Size

Memory and PCIe access is slow compared to CPU operations:

- Process a bunch of packets during each software iteration and amortize the access cost over multiple packets.

Data doesn't seem to be near the CPU when it needs to be:

- For memory access, use HW or SW controlled prefetching. For PCIe access, use Data Direct IO to write data directly into cache.

Access to shared data structures is a bottleneck:

- Use access schemes that reduce the amount of sharing (e.g. lockless queues for message passing).

Page tables are constantly evicted (DTLB Thrashing):

- Allow Linux to use Huge Pages (2MB, 1GB)

The system can't keep up with the interrupts for packet Rx:

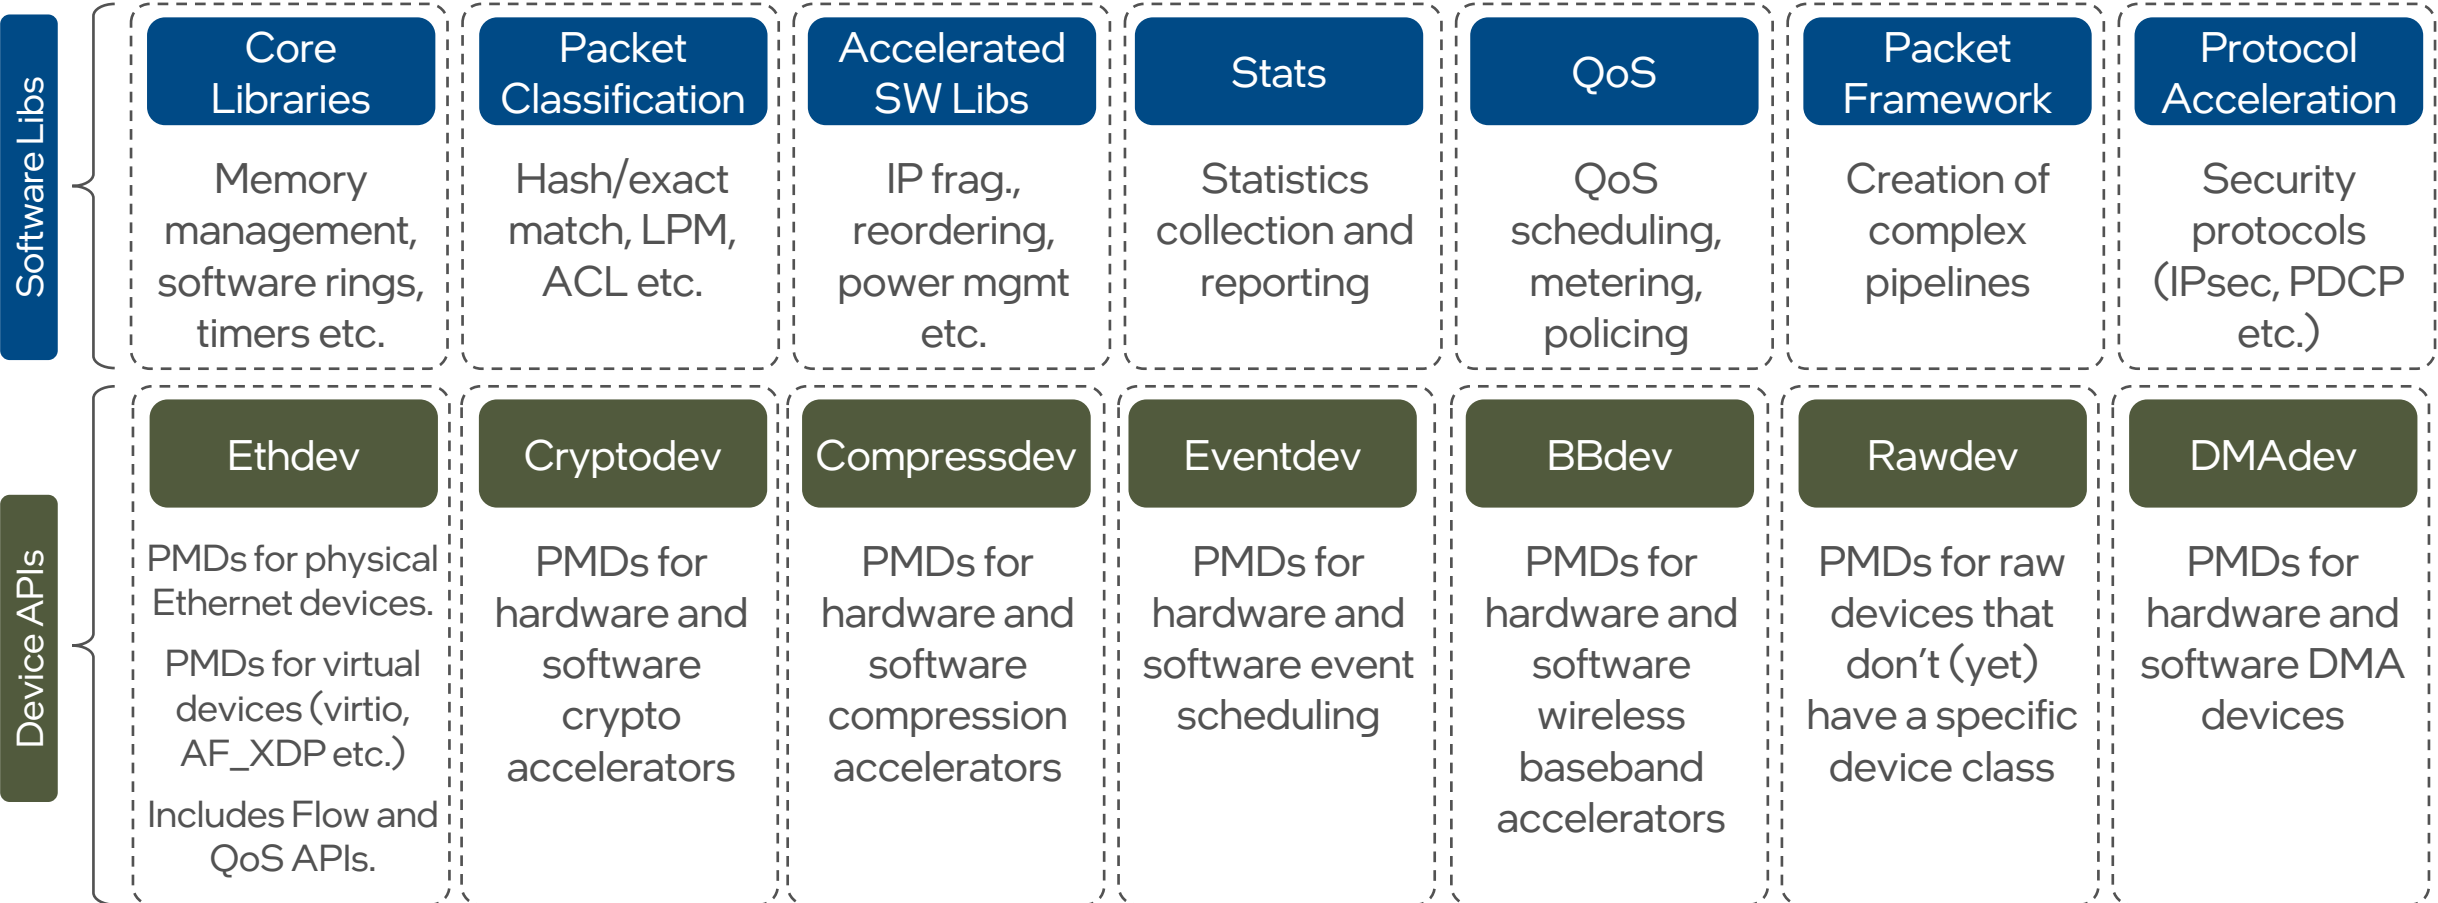

- Switch from an interrupt-driven to a polled-mode driver.

Linux scheduler high overhead for task switches:

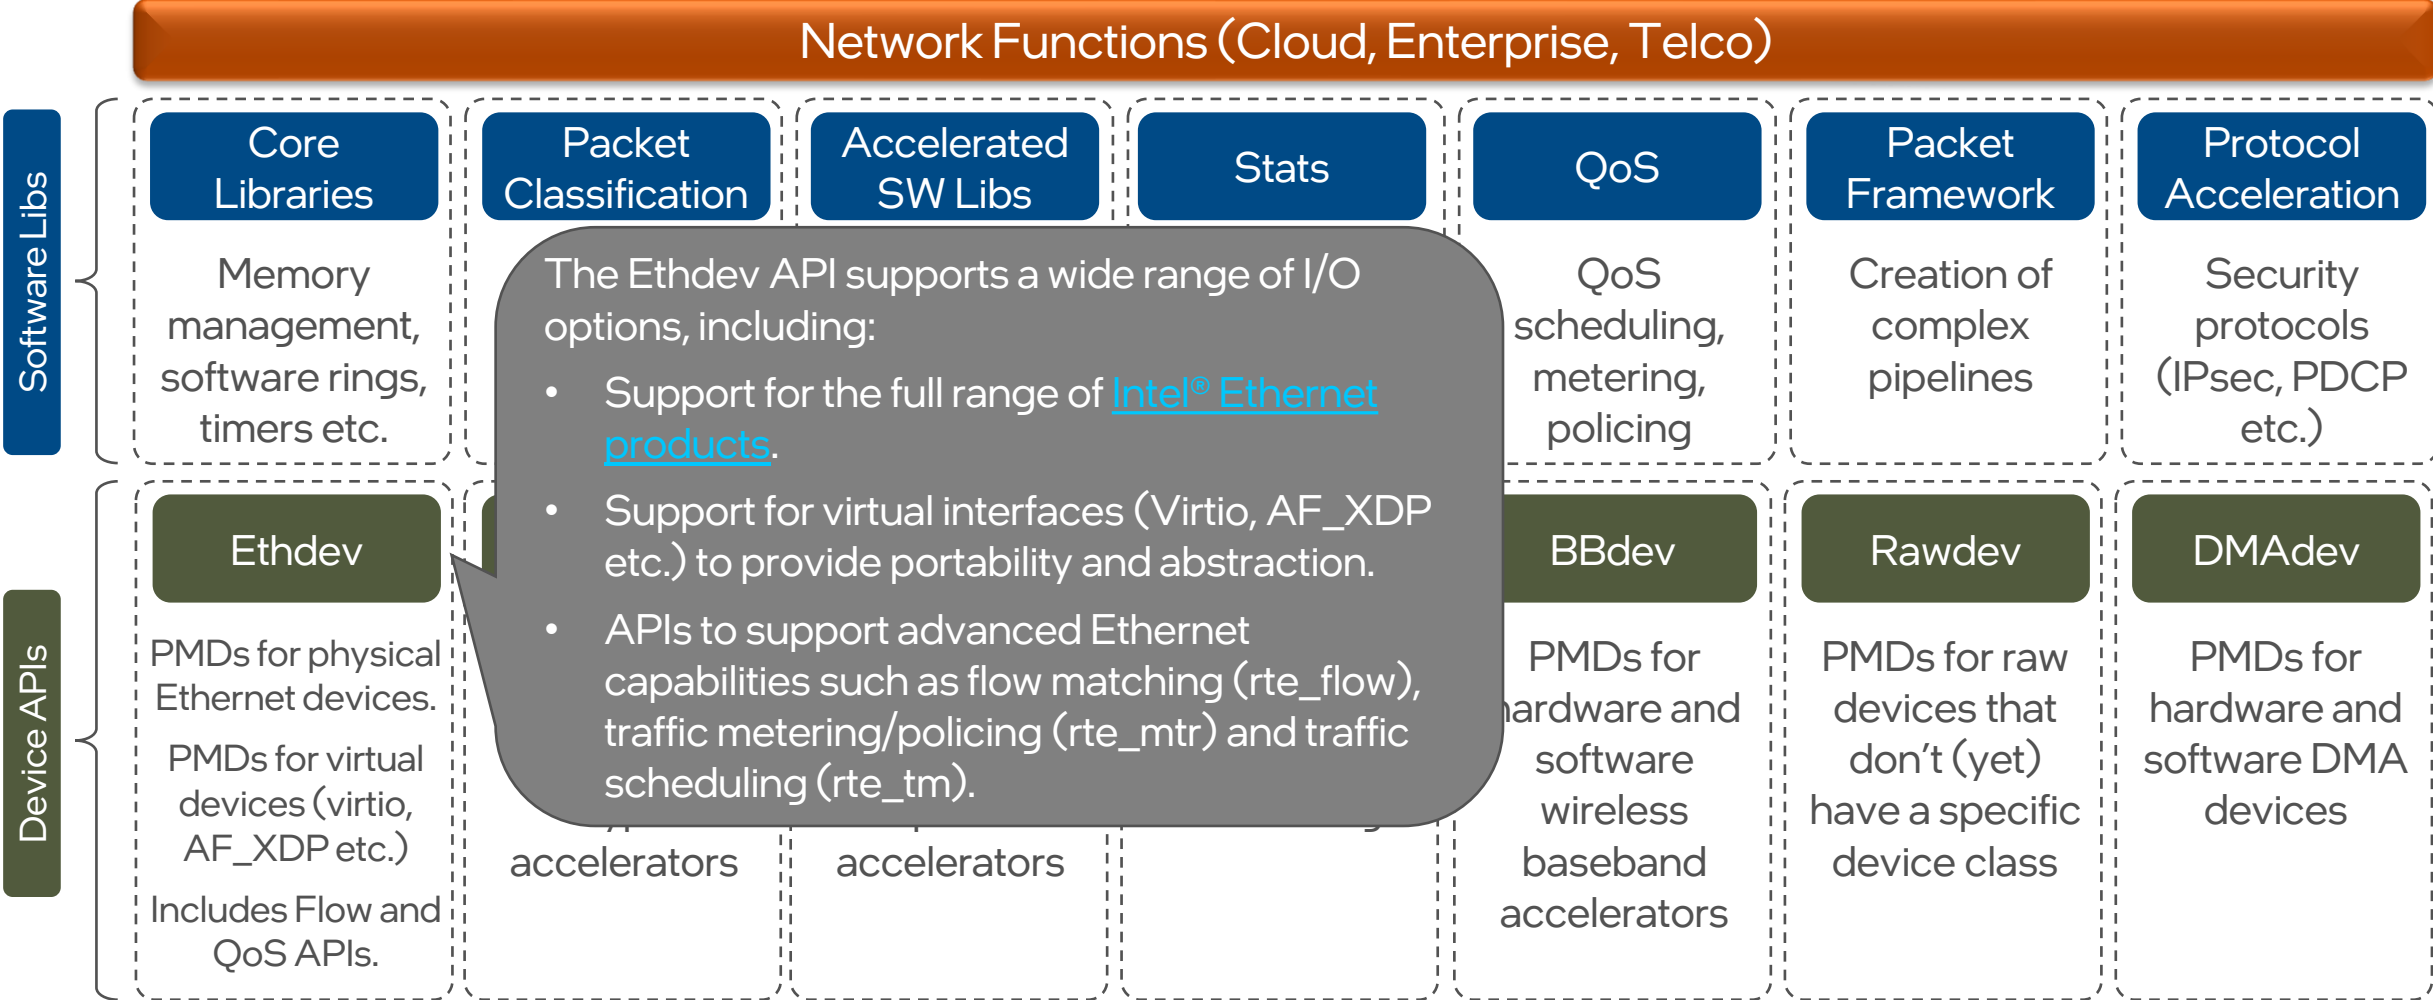

- Bind a single software thread to a logical core.

DPDK Scope

Network Functions (Cloud, Enterprise, Telco)

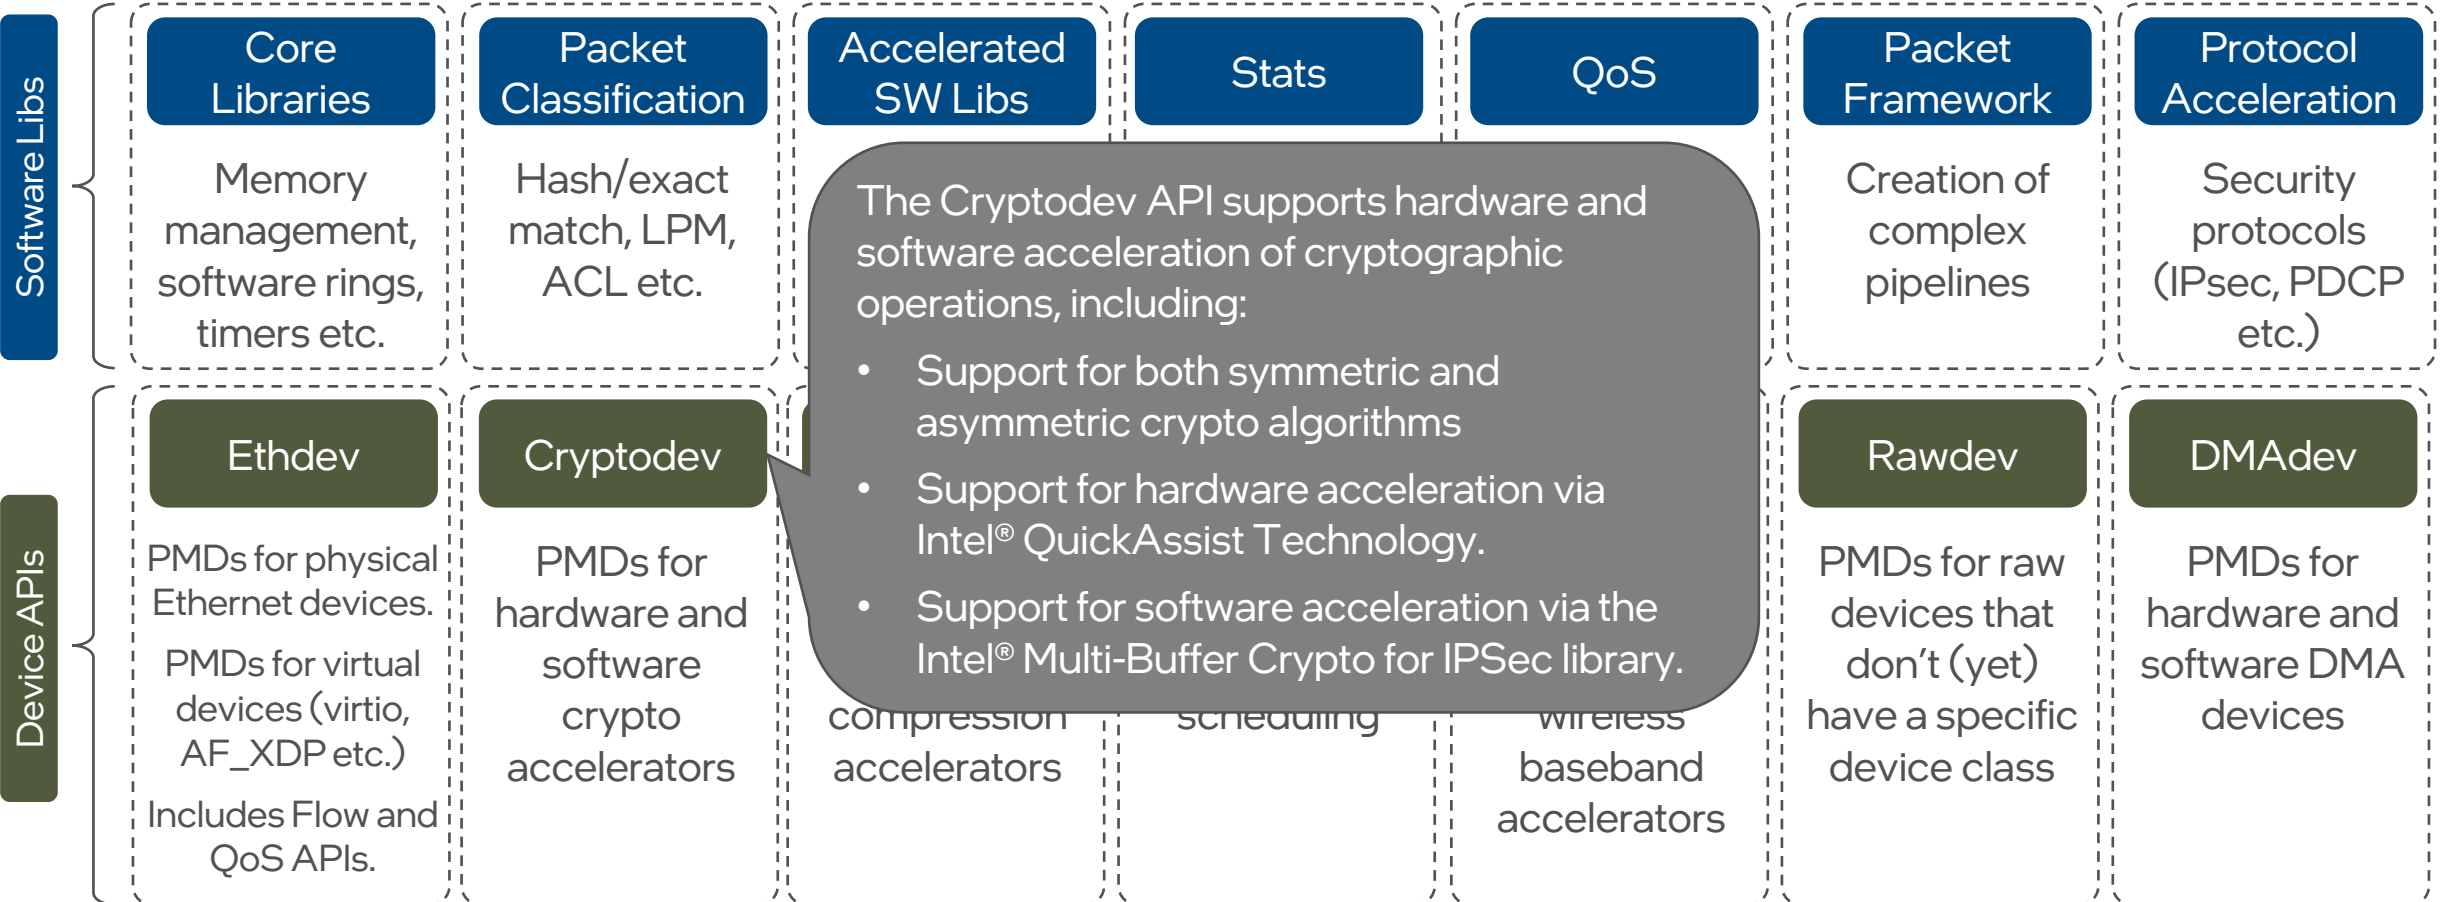

DPDK Scope

Network Functions (Cloud, Enterprise, Telco)

Example DPDK Application

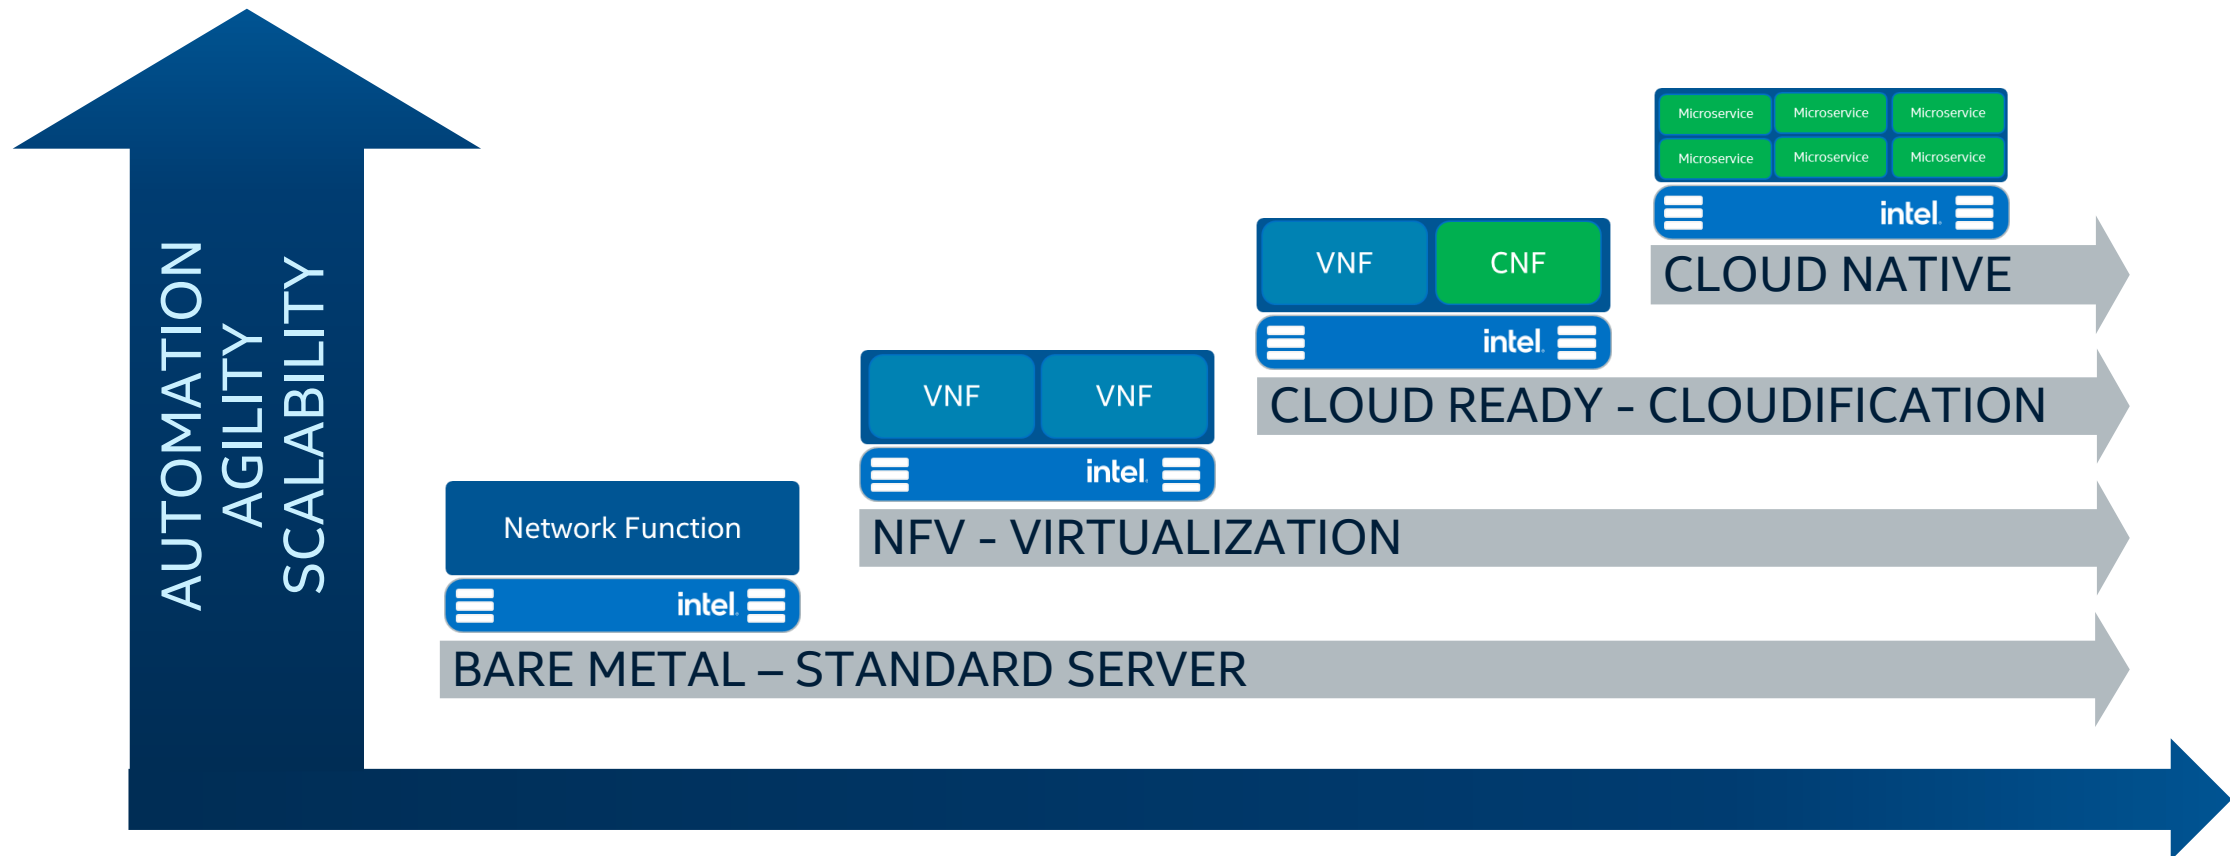

The many steps and types of operations required by packet processing workloads once demanded the use of multiple, disparate and often custom silicon components (NPUs, ASICs) for performance and efficiency.

Today, the right combination of platform, ingredients, software optimization and ecosystem support can enhance even these demanding packet workloads.

Networking Evolution

DPDK continues to evolve to meet the needs of the networking industry.

Networking Evolution - DPDK

Key DPDK Enhancements

Virtual/Cloud Interfaces

- Virtio (inc. virtio 1.1, virtio-user, vDPA)
- AF_XDP
- VMware VMXNET3
- Amazon ENA
- Microsoft NETVSC
- Google VNIC (in progress)

Transparent Acceleration

- Acceleration APIs support both hardware and software acceleration: cryptodev, compressdev, eventdev, BBdev etc.

Flexibility/Ease of Use

- Dynamic memory management
- Live migration
- K8S integration

And many more ...

DPDK Release Cadence

- Change from 4 to 3 releases per year in 2022.
- Long-Term Support (LTS) provides a stable release maintained for 2 years:
 - Provides a stable target on which to base applications or packages.
 - Bug fixes that do not change the ABI will be back-ported.
 - In general, new features will not be back-ported.

amdocs

vRAN: The Next Step in Network Transformation

*"Based on the **Data Plane Development Kit (DPDK)**, AVS (Accelerated Virtual Switch) achieves line rate virtual switching performance using fewer CPU cores than any other virtual switch. The Altiostar vRAN solution takes full advantage of multi-socket and multi-core processors and **DPDK** support for maximum use of underlying hardware resources*

5G Core Network UPF

*"Together, Intel® processors, Intel® network adapters, **DPDK**, and other relevant technologies form a platform that reduces device complexity and improves network utilization to meet telecom carriers' requirements for the flexibility, scalability, reliability, and cost efficiency "*

ZTE

NEC's UPF Maximizes 5G Value

*"NEC uses Intel's technologies of **Data Plane Development Kit (DPDK)** and Dynamic Device Personalization (DDP)."*
"Leveraging the benefits of cloud native UPF allows flexible and rapid deployment scenarios based on traffic and network characteristics."

NEC

Metaswitch SBC 26% Improvement

*"Benchmark tests were configured using the **Data Plane Development Kit (DPDK)** to improve packet processing performance and optimize the system for maximum advanced media capacity."*

metaswitch

Clavister NetShield Firewall Scales Linearly

*"Clavister utilized the open source **Data Plane Development Kit (DPDK)**, a set of software libraries and drivers in NetShield Virtual's scalable data plane. **DPDK** facilitates high-performance data throughput in an Intel® architecture-based server"*

Deployable Apps for Customer Use Cases

- Hassnaa Moustafa, Principal Engineer, Intel Corporation

The Intel logo is centered on a solid blue background. It features the word "intel" in a white, lowercase, sans-serif font. A small, light blue square is positioned above the first vertical stroke of the letter 'i'. To the right of the word "intel" is a small white registered trademark symbol (®).
