

Executive biography

Adnan Saleem

CTO Software & Cloud Solutions

Radisys

Adnan serves as CTO Software and Cloud Solutions at Radisys, with more than 30 years of extensive experience in the mobile and wireline telecommunications industry, previously serving as Technology Development Director and Chief Architect roles. Adnan has broad and in-depth experience in design, development, and deployment of fully virtualized and cloud native real-time communications network functions and real time multimedia VoIP/VoLTE and AI/ML leveraged 5G Edge solutions.

He has been an active contributor to various industry standards organizations, including IETF, ETSI/3GPP/NFV and other opensource organizations. Adnan is the primary author of IETF RFC 5707, Media Server Markup Language, a globally adopted industry specification for VoIP/Multimedia Media Server control and is the inventor of 5 granted US Patents in the Realtime IP Communications space.
